EDUCATION

University of Notre Dame | Notre Dame, IN

Graduation May 2027

Bachelor of Science

GPA: 3.9

Major: Computer Science

Relevant Courses: Data Structure, Systems Programming, Logic Design, Computing Numerical Methods and Data Science, Database Systems Concepts, Introduction to Artificial Intelligence, Operating System Principles

EXPERIENCE

Undergraduate Research Assistant | Kitakyushu, Japan

June 2025 – July 2025

Kyushu Institute of Technology

- Collaborated with other international students to propose strategies to determine fish feeding behavior from video feeds and researched fish behavior correlation with satiation levels
- Engineered a fish tracking system in MATLAB using contrast enhancement and computer vision for blob analysis, resulting in an 80% tracking accuracy algorithm and enabling quantitative analysis to study fish feeding behavior

Undergraduate Research Assistant | Notre Dame, IN

January 2025 – May 2025

Department of Computer Science and Engineering, Notre Dame

- Developed an Android application using Kotlin and Android Studio to perform background Bluetooth Low Energy (BLE) scanning, incorporating faculty feedback to refine its functionality
- Evaluated and resolved limitations of existing BLE scanning technologies by designing and implementing a layered-architecture mobile app, which enabled continuous background Bluetooth interactions

CLUBS AND ACTIVITIES

CS4Good Club | Notre Dame, IN

October 2023 – Present

Group Member

- Coordinated in a team of 6 using Agile-inspired workflow to develop educational projects, delivering learning tools for the local community
- Applied user-centered design principles to develop an educational website using HTML, CSS, and JavaScript, featuring a custom code editor and interactive graphics to teach basic coding skills to middle school students

IrishSat | Notre Dame, IN

August 2024 – January 2025

Group Member

- Researched and compiled documentation on a satellite sensor to develop a Python program that accurately extracts specific measurement data.
- Translated Python code into C++ to implement OpenCV functionality, enabling fast data processing for a student-led aerospace project.

PROJECTS

FlightBowl | Notre Dame, IN

August 2025–December 2025

- Developed backend APIs for a simulated flight booking and management system using Python, Flask, and SQLAlchemy, enabling flight coordination for band members across multiple airports and game destinations.
- Implemented asynchronous flight scraping with background job tracking using Python threading, keeping the frontend responsive during long-running scraping operations.

Lover Boy's Closet | Notre Dame, IN

August 2025–December 2025

- Designed and evaluated an AI-driven daily outfit recommendation system using collaborative filtering and deep learning to model user–clothing preferences under contextual factors such as weather, season, and events.
- Implemented and compared multiple recommender architectures in Python, PySpark, and TensorFlow, analyzing accuracy, overfitting, and contextual limitations to assess real-world recommendation quality.

Wedding Website | Albuquerque, NM June 2024–January 2025

- Designed and styled a custom wedding website to provide guests with essential information, utilizing the React framework with TypeScript to create web pages and HTML and CSS for a visually appealing interface
- Collaborated closely with the client to gather feedback and implement requested modifications and features

TECHNICAL AND LANGUAGE SKILLS

Technical: Python, MATLAB, C, Kotlin, React, TypeScript, HTML, CSS, JavaScript, SolidWorks, Github, Linux

Languages: English (fluent), Vietnamese (fluent), Japanese (basic)
